

Senior Simulation Engineer positions In Maryland

Job Classification: Subject Matter Expert
Department: Pipeline Simulation
Division: Oil & Gas North America

Are you ready for a change of climate? We have opportunities in Maryland for Chemical and Mechanical Engineers with formal training in fluid dynamics and heat transfer. If pertinent knowledge has been developed through job experience, our client will consider candidates outside of these two fields.

The right candidate will work for a large, innovative and environmentally responsible global company that provides excellent benefits and above average compensation to their employees. Due to new business opportunities, our client has an urgent requirement to fill senior staff positions for Simulation and Modeling Engineers. Although these positions are not for software developers or programmers, they do require individuals that have a great deal of application deployment and computer expertise.

Your experience in the Oil and Gas industry is a major plus. Your experience can come from production, refining or midstream transportation (pipelines). Experience in process control and automation is a plus. As a senior member of a large project team, duties will include design documentation, implementation, testing, customer training and site commissioning. The candidate will also oversee other engineers and provide mentoring for junior staff.

Visit our website www.sebenzasource.com to learn more about the jobs that we have available for this client. We have openings for Sr. Simulation Engineers, Sr. Technical Specialists and Simulation Service Engineers.

If this is something you would like to discuss further, please send your resume to Info@sebenzasource.com
